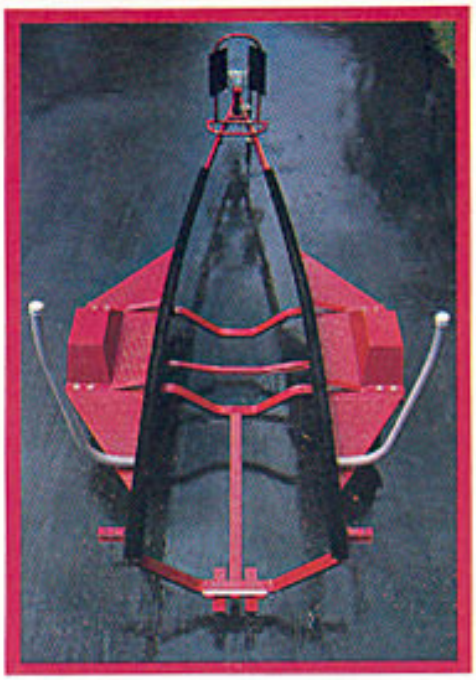
TO THE LAST DETAIL

Correct Craft has set the standard for boat building excellence for more than six decades. High quality is a family tradition that dates back to 1925. Skilled craftsmen construct every boat with exceptional care, genuine pride and a sharp eye for detail. Each boat bearing the Correct Craft name meets or exceeds all Coast Guard regulations and National Marine Manufacturers Association Certified Standards.

Completing the boating package, Correct Craft manufactures its own trailers—each one precisely engineered to match the hull of a specific boat. Correct Craft is one of only a very few boat building companies that owns and operates its own trailer manufacturing facility. Correct Craft trailers are incredibly rugged and feature a design especially suited for the inboard drive system of its boats. The convenient drive-on, drive-off system allows launch and recovery without having to leave the boat.

Correct Craft takes a measure of well-earned pride in providing a superior boating package that provides uncompromising quality down to the last detail.



States have varying laws about trailer tie-downs. Learn what your local and state laws are about trailer tie-downs before ordering your Correct Craft trailer. Tie-downs are equipped on all Correct Craft trailers, however, you are responsible for buying and installing straps.
